EPOXY TERRAZZO FLOORING

- Built to last a lifetime
- Elegant, custom-designed floors made to withstand millions of foot-falls

WHAT IS NEOFLO Ultra TERRAZZO?

Neoflor Ultra Terrazzo is a blend of epoxy resin, hardeners, special additives and aggregates comprising of marble chips, granite or crushed glass or a combination of these.

They are mixed at site and laid in requisite sections formed by divider strips such as aluminium, zinc, brass or Stainless steel.

The designs, colours and patterns that can be achieved with epoxy terrazzo flooring is unmatched with any other polymeric flooring.

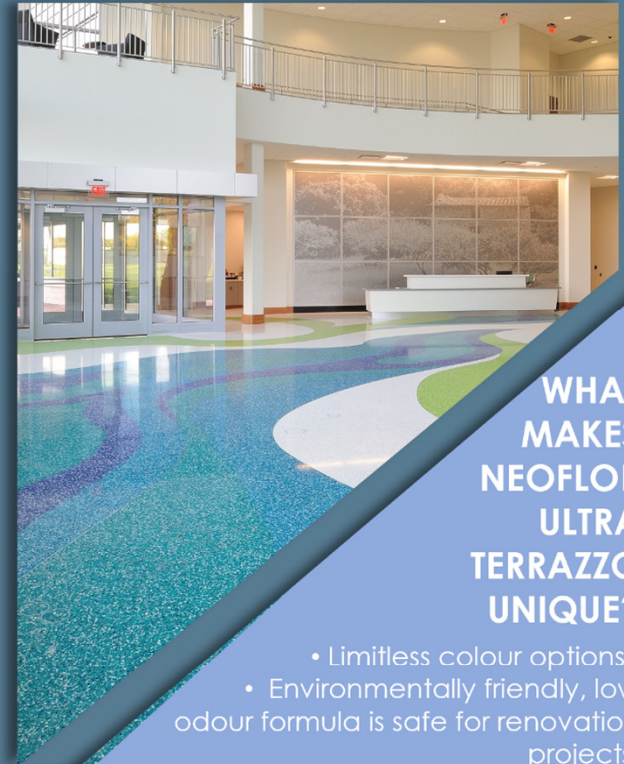

Laying and finishing of epoxy terrazzo flooring is not only a science, but also an art. They are artisans at their best to produce a stunning floor that can last a life-time.

No wonder that epoxy terrazzo floors are the go-to floorings for designers of airports, schools, museums, malls and alike due to its ability to withstand a large amount of foot-falls.

WHY NEOCRETE?

Neocrete is a technology company that has passion and vision to deliver world-class products to India at affordable price. Ethos of Neocrete is built on the belief that the brand value is not the product per se, but the value perceived by the customers and hence adopts the following three-pronged approach:

- Techno- Centric** [upgradation of products with the latest materials, additives and systems,
- Eco-centric** [all products are VOC compliant] and
- Customer- Centric** [working closely with customers, architects and consultants]

WHAT MAKES NEOFLO Ultra TERRAZZO UNIQUE?

- Limitless colour options.
- Environmentally friendly, low odour formula is safe for renovation projects.
- Outstanding workability, colour consistency and performance.
 - Thickness 6 to 10mm
- Thinnest, lightest weight system with vastly superior tensile strength and compressive strength.
- Excellent chemical resistance (stain resistance) and the lowest maintenance cost of any hard surface flooring.
- Quick cure and excellent turn around allows for high production installations with minimum impact on return-to-service time.
