

Established in 2006, Neocrete Technologies has been at the forefront of technological innovation in the field of in-situ floorings and coatings with a backbone of epoxy/PU/Acrylic resins. Their technical prowess along with a single-minded determination to satisfy customer requirements has served them well in the industry.

Beginning with a modest range of products with a few customers, Neocrete has grown over the years, now offering more than 150 products for a variety of industries such as electronics, aviation, pharmaceuticals, automobiles, textiles, light & heavy engineering industries and alike.

Neoflor VF for Hospitals

Neocrete's USP

- All products are either solvent-free or water-based and are 100% VOC Compliant.
- All epoxy top-coats are formulated with cyclo-aliphatic amines to ensure high-gloss, high-chemical resistant and high-quality performance.
- All floor toppings & coatings are supplied in pre-weighed cans or buckets to avoid any errors or weighments at the time of application.
- Many products are in service at different industries with different service conditions for many years and thus withstood test of time in Indian conditions for the last 17 years

Neoflor TUFF & VF system for Industrial Applications

PU Concrete & Epoxy-Cement Composites

Catering to an increasing awareness over environment protection, Neocrete offers a variety of products to meet the ever-increasing demand for water-borne systems.

These systems are VOC compliant, moisture-insensitive, typically fast setting and consequent short turn-around time.

PU Concrete provide best-in-class abrasion, impact & chemical resistance and are ideally suitable for industries having heavy movement and impact.

NEOCRETE HDF

Neoflor Ultra Epoxy Terrazzo & Neoflor Ultra Cement Terrazzo

Neocrete's epoxy terrazzo viz. Neoflor Ultra Terrazzo is unsurpassed in its performance characteristics such as compressive and flexural strengths, abrasion resistance and finishability. Neocrete's state-of-the-art Silicon hybrid sealer accentuates the performance in providing stain-free, glossy protection that is unmatched in the industry.

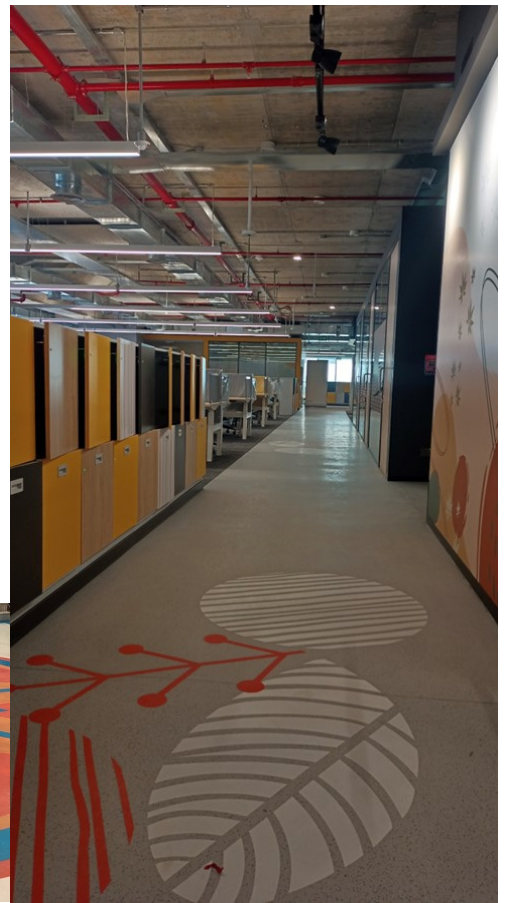

It is conceptualized, designed, formulated and produced keeping the following three goals in mind: Environment-friendly, durability & crack-free

Highly suitable for high-traffic areas such as malls, departmental stores, offices, museums, railway-platforms and other such public utility spaces, Neoflor Terrazzo can be used to provide stunning colours, designs and patterns

Any execution of floor needs a committed team, but more so for terrazzo. The skill, craftsmanship, attention to detail

and passion in providing the best terrazzo floor is what makes Neocrete, a leader in this field.

Our team boasts of having done more than 5 lakhs sq.ft of terrazzo in India, having mastered the art of providing superior floors.

Neocoat UTM Cementitious micro-topping

Neocrete makes cutting-edge products that can fully do away with this laborious process for other surfaces such as tiles, marble, granite, wood etc by resurfacing without removing

Neocrete offers the entire range of concrete resurfacing options to metamorphosize your floors

Neocrete's Products

- Polishable or stampable cement systems
- Ready-to-use cement compounds that may be applied at various thickness ranges
- Pre-blended cement mixes that require the addition of sand and water

Decorative Floors & Walls

Neocrete offers a wide variety of decorative options for floors and walls as well as sports floorings and coatings.

Some of the products are:

- 3D floors & walls with high-gloss transparent epoxy coatings
- PU-Acrylic hybrid coating for both interior & exterior concrete floors for badminton, tennis, volley-ball courts and jogging tracks
- Metallic textures for walls
- Stampable putty for walls
- Stamped concrete for exterior floors

FIRST COMPANY IN INDIA TO INTRODUCE CARBON NANO-TUBE BASED ESD FLOORINGS

WHAT IS ESD?

As a person walks across a standard epoxy floor, it is very easy to build up static charge through friction because epoxy acts as an insulative material. Where there is static, there is electro-static discharge. This can cause huge catastrophe in certain industries. ESD floors, also known as static dissipative floors (10^4 to 10^6 ohms) or conductive floors (2.5×10^4 to 10^6 ohms), provide superior static control, inhibiting static electricity on a person or from reaching sensitive equipment.

BENEFITS OF NEOFLOR ESD FLOORING:

Our ESD floors are made using the state-of-the-art dispersion technology to make our floors volume conductive rather than surface conductive compared to traditional technologies. We achieved this unique properties using single wall carbon nanotubes (SWCNT) in all our ESD / Conductive floorings and coatings to get uniform surface to surface and surface to ground resistivity. The Cast In-Situ polymer ESD floors perform more effectively and thoroughly than other types of anti-static flooring, such as carbon-fibre based epoxy flooring, ESD mats or ESD tile. Conductive elements within a cast in-situ polymer flooring system help bridge the pathway from the surface of the floor to the system's grounding layer.

Strong product profile to meet most flooring requirements

Interior Applications			Exterior Applications
